Open'lx AI — Intelligence Platform

One Intelligence. Infinite Possibilities.

Open'lx AI is a premium, futuristic multi-model AI workspace and prompt intelligence platform. Designed with an ultra-sleek glassmorphic dark interface, Open'lx AI provides unified access to multi-model AI chats, visual workflows, custom agents, and a dedicated prompt studio.

Project & Design Identity

- **Theme Mood:** Deep Purple × Graphite Gray × Midnight Black
- **Visual Style:** Premium • Glass UI • Minimal • Professional • Micro-Interactions
- **Color Palette:**
 - **Primary Purple:** #7C3AED
 - **Deep Purple:** #4C1D95
 - **Electric Violet:** #A855F7
 - **Midnight Background:** #080B14
 - **Graphite Surface:** #111522
 - **Elevated Surface:** #181D2B
 - **Border Accent:** #2A3040

Core Features

-  **Multi-Model AI Chat:** Unified conversational UI supporting streaming, file/image inputs, and web search toggles.
-  **Open'lx Model Hub:** Real-time routing across proprietary and provider models filtered by speed, context, and capabilities.
-  **Prompt Intelligence Studio:** Goal-driven prompt enhancer, intent analyzer, and structure optimizer.
-  **AI Agent Builder:** Custom assistant setup with tool permissions, system prompts, and memory settings.

- ⚡ **Workflow Automation:** Visual node-based workflow pipeline (Triggers → AI Processing → Decisions → Actions).
- 🧪 **Open'lx AI Lab:** Side-by-side model response comparisons and dynamic parameter tuning.
- 📁 **Prompt Dashboard:** Folder organization, dynamic tagging, list/grid views, and interactive context menus.

🔧 Tech Stack & Architecture

Frontend

- Framework: Next.js (App Router) + React + TypeScript
- Styling: Tailwind CSS + Custom Design System Tokens
- Components: Headless UI / Accessible Primitive System
- Animations: Framer Motion

Backend & Storage

- Database: PostgreSQL via Prisma ORM
- Caching & Rate Limiting: Redis
- Authentication: JWT / OAuth2

AI Layer

- Dynamic Provider Abstraction Layer
- Real-Time Server-Sent Events (SSE) Streaming
- Token Usage & Cost Tracking

🧠 CRTSE Engineering Prompts Library

Production-ready master prompts structured using the **CRTSE Framework**:

- **C** — Context (Project setup & scenario)
- **R** — Role (Expert specialization)
- **T** — Task (Exact operational goal)
- **S** — Standards (Quality guardrails & constraints)
- **E** — Example (Copy-pasteable execution prompt)

Part 1: REST API Endpoint Generator

- **Context:** Building a scalable multi-tenant SaaS backend for Open'lx AI with strict typing, zero-trust request validation, and standard error envelopes.
- **Role:** Lead Node.js/TypeScript Architect specializing in RESTful API design, defensive programming, and Express ecosystem security.
- **Task:** Generate a complete `POST /api/v1/users` endpoint split cleanly into route definition, controller, schema validation, and middleware layers.
- **Standards:**
 - Must use `Express`, `Zod`, `Prisma`, and `jsonwebtoken`.
 - Fully type-safe; zero usage of `any`.
 - Implements RFC 7807 problem details format for error responses (400, 409, 422, 500).
 - Enforces password complexity (min 12 chars, regex check) and strips sensitive hash fields.

``markdown You are a Lead Node.js/TypeScript Backend Architect. Create a production-grade `POST /api/v1/users` endpoint for an enterprise SaaS backend.

Tech Stack: Express, TypeScript, Zod, Prisma ORM, jsonwebtoken.

Output Requirement: Provide modular code across two clean files with full JSDoc:

1. `src/routes/users.ts` (Route definitions & Controller logic)
2. `src/middleware/auth.ts` (JWT Authentication & Role verification)

Security & Logic Requirements:

- **Input Validation:** Use `Zod` to validate `body: email` (valid email format), `password` (min 12 chars, 1 uppercase, 1 symbol, 1 number), `role` (enum: `USER`, `ADMIN`).
- **Error Handling:** Handle duplicate email with 409 Conflict, validation errors with 400 Bad Request (returning targeted field path errors), JWT auth failures with 401/403, and unhandled exceptions with 500 Internal Error.
- **Output Security:** Return 201 Created with a payload that strips sensitive field `passwordHash` and includes a generated JWT bearer token.
- **No third-party dependencies** outside `express`, `zod`, `@prisma/client`, and `jsonwebtoken`.# new-repo OPEN'IX AI — COMPLETE MASTER DESIGN & BUILD PROMPT  PROJECT IDENTITY
